User Stories- EagleEye Parking Project

User-Story ID	Contents
US-1	As a driver, I want to see how full a parking lot is before I arrive, so that I can avoid wasting time searching for parking or driving to a full lot.
US-2	As a driver, I want a simple color indicator showing how full a parking lot is, so I can quickly judge my chances of finding a parking space.
US-3	As a student, I want to receive real-time alerts about lot closures and hazards, such as ice, construction, and flooding, so that I don't waste time driving to an unusable lot.
US-4	As a student, I want to see which parking lots my permit allows me to park in, so I can quickly find a valid spot without guessing or checking signs on site.
US-5	As a commuter, I want to filter the parking map by my specific permit type so that I don’t accidentally drive to a lot where I am not allowed to park.
US-6	As a student, I want to be alerted if I am parked in a lot that is designated for game-day towing so that I can relocate my vehicle in time.
US-7	As a commuter, I want the app to notify me when I park in a lot not permitted for my parking type, so I can move my vehicle before receiving a citation or being towed.
US-8	As a user, I want to report road hazards or incidents in the app so other users on the same route can avoid danger or delays.
US-9	As a student, I want the app to show the closest available parking lot to my current location or destination, so that I can minimize walking distance and save time.
US-10	As a student, I want to see estimated parking availability trends by time of day, so that I can plan when and where to park more efficiently.
US-11	As a staff member, I want to mark a specific lot section as “Closed” for maintenance so that the “live” status of the lots is as accurate as possible.
