1. Wireframe

Login View

This screen handles user authentication and serves as the entry point to the application.

- **Header:** Standard page title indicating the current action ("Login").
- **Text Input Fields:**
  - **Username:** Text entry for the user's account identifier.
  - **Password:** Secure text entry for the user's password.
- **Password Recovery ('Forgot password?'):** A secondary hyperlink that should route the user to a password reset flow.
- **Primary Action ('login' button):** Submits the credentials for authentication.
- **Secondary Action ('or sign up'):** A hyperlink routes new users to the account registration screen.

Map Tab View + Alerts Sub-View

This screen serves as the primary dashboard, providing a real-time geographical overview of parking availability.

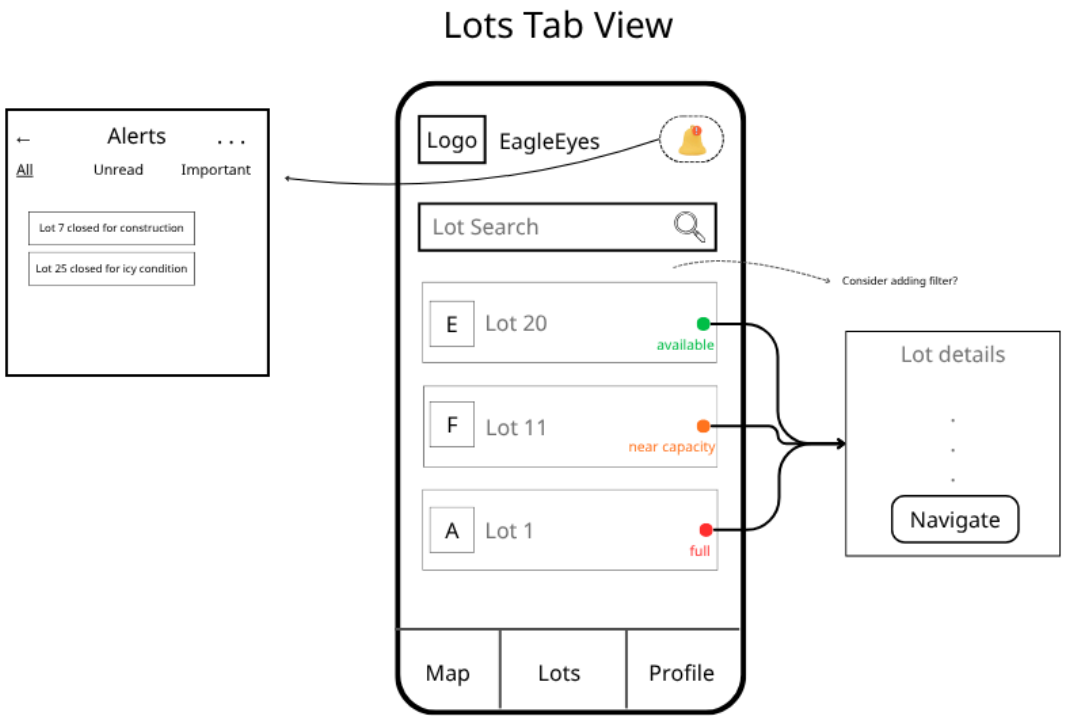

- **Global Header:** Displays the app logo and name ("EagleEyes").
- **Notification Bell:** Contains a badge indicator (red exclamation mark) to alert the user of new/unread notifications. Tapping this triggers the **Alerts** screen.

- **Location & Permit Filters:** Dropdown menus allowing users to filter the map data by **Campus** (e.g., Frisco Landing) and their specific **Permit** type (e.g., Eagle) to only see relevant parking zones.
- **View Toggles:** A segmented control allowing the user to switch the map style between standard "Map" and "Satellite" views.
- **Map Interface:** The core visual area where parking lots are displayed. Lots should be color-coded based on real-time occupancy data.
- **Bottom Navigation Bar:** Persistent navigation allowing the user to switch between the three main app modules: Map (currently active), Lots, and Profile.

Alerts Sub-View (Triggered by Notification Bell)

- **Header & Navigation:** Includes a back arrow to return to the previous screen and a title ("Alerts").
- **Filter Tabs:** Allows users to sort notifications by "All", "Unread", or "Important".
- **Alert Feed:** Notifications are grouped chronologically (e.g., "Today", "Yesterday") and display critical updates like lot closures or icy conditions

Lot Tab View + Alert Sub-View + Lot Details Sub-View

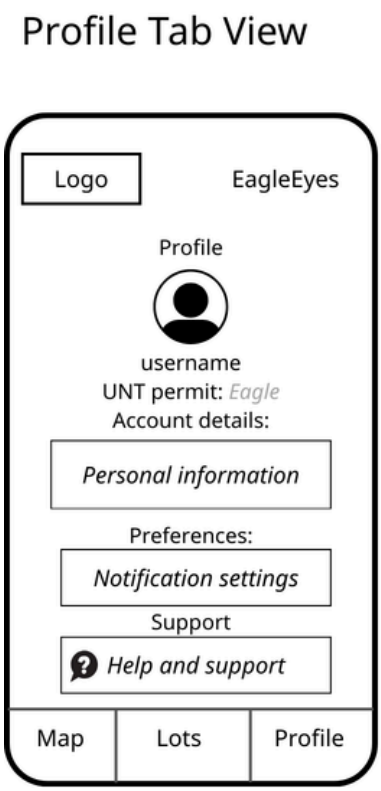

This screen provides a list-based alternative to the map view, focusing on specific lot statuses and searching.

- **Search Bar ('Lot Search'):** Text input with a search icon allowing users to query specific lots by name or number. *Note: As suggested in the wireframe, adding a filter icon next to the search bar would be highly beneficial for sorting by distance or availability.*
- **Lot Cards (List Items):** Each card represents a parking lot and contains:
    - **Permit Indicator:** A visual tag (e.g., 'E', 'F', 'A') indicating which permit is required.
    - **Lot Name/Identifier:** (e.g., Lot 20).
    - **Occupancy Status:** A clear visual and text indicator of real-time capacity (Green/available, Orange/near capacity, Red/full).
- **Interaction (Tap to Detail):** Tapping any Lot Card pushes the user to the **Lot Details** view.

Lot Details Sub-View

- **Information Display:** A modal or new screen showing expanded information about the selected lot (e.g., total spots, operational hours).
- **Primary Action ('Navigate'):** A button that likely hands off the lot's coordinates to the device's native mapping application (Apple Maps, Google Maps) for turn-by-turn directions.

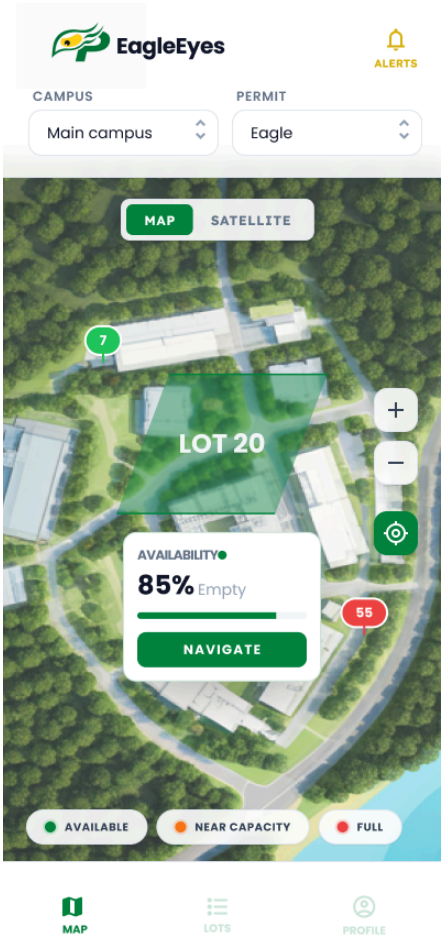

Profile Tab View

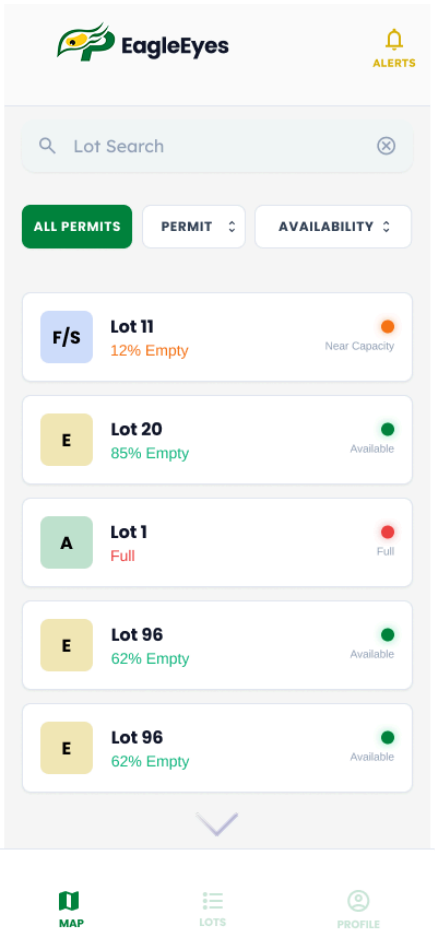

This screen allows the user to manage their account settings and app preferences.

2. **User Information Header:** Displays a generic profile avatar, the user's username, and their currently active UNT permit type (e.g., "UNT permit: Eagle").
3. **Account Details Menu:** A stacked list of navigational buttons for app management:
    a. **Personal information:** Routes to a screen to edit name, email, password, or vehicle details.
    b. **Notification settings:** Allows the user to toggle push notifications or specific alert types on/off.
    c. **Help and support:** Routes to FAQs, contact information, or a ticketing system. Features a distinct icon to draw attention.
